

**SYSTEM AND METHOD FOR DETECTING AND
INDICATING COMMUNICATION PROTOCOLS**

Abstract of Disclosure

5

A system that includes a first indicator, a second indicator, and a device associated with the first indicator and the second operator is provided. The device is configured to receive a packet. The device is also configured to detect a first protocol associated with the packet and cause the first indicator to be activated in response to detecting the first protocol. The device is further configured to detect a second protocol associated with the packet and cause the second indicator to be activated in response to detecting the second protocol.
